

# Student Tutoring Achievement for Reading

## Oral Reading Fluency Lesson #5

1. Pick a paragraph from the text that the student read today. The paragraph should be one where the **student's reading sounded fluent** (the student's reading was accurate, was not choppy, and the student read mostly in meaningful phrases).
2. Using a **stopwatch**, time the student as he/she reads the paragraph. Encourage the student to put forth his/her best effort in reading.
3. Count the number of words the student read.
4. Figure the words read correctly per minute (wcpm) by following the formula below:

Total number of words read \_\_\_\_\_

Subtract number of errors \_\_\_\_\_

Words correct per minute (wcpm) \_\_\_\_\_

**Example:** If a student reads **59** words and has **7** errors, the student reads **52** *words correct per minute* (wcpm).

**Note:** Record the *wcpm* on the Lesson Plan.
